

THE CONNECTED WORKFORCE PLATFORM

# Every minute matters on the floor

Detect issues early. Stamp out defects fast. Dori gives your team the tools to spot problems in real-time and drive continuous product improvement, right from the floor.

[BOOK A DEMO](#)

Dori AI vision spots what humans can't.

## Powerful Solutions for Any Operation

See how connected apps can enhance collaboration, streamline operations, and boost productivity.

[Discrete Manufacturing](#)
[Pharmaceuticals](#)
[Medical Device](#)

Remove silos. Streamline workflows. Gain insights.

- ◆ Error-proof operator workflows with apps that pull data from connected systems
- ◆ Understand the current status of all work orders, materials, and equipment
- ◆ Automate data capture from machines and devices
- ◆ Unlock insights and remove inefficiencies with a common data schema

DRIVE ACTION THAT MATTERS

## See ROI in 2 Weeks

Reduced downtime, increased productivity and better quality. Engaged team member are an extra bonus

**-54%**

Less downtime

**-50%**

Less training time

**+44%**

More output

**-10%**

Less scrap

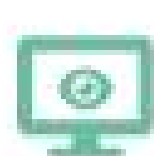

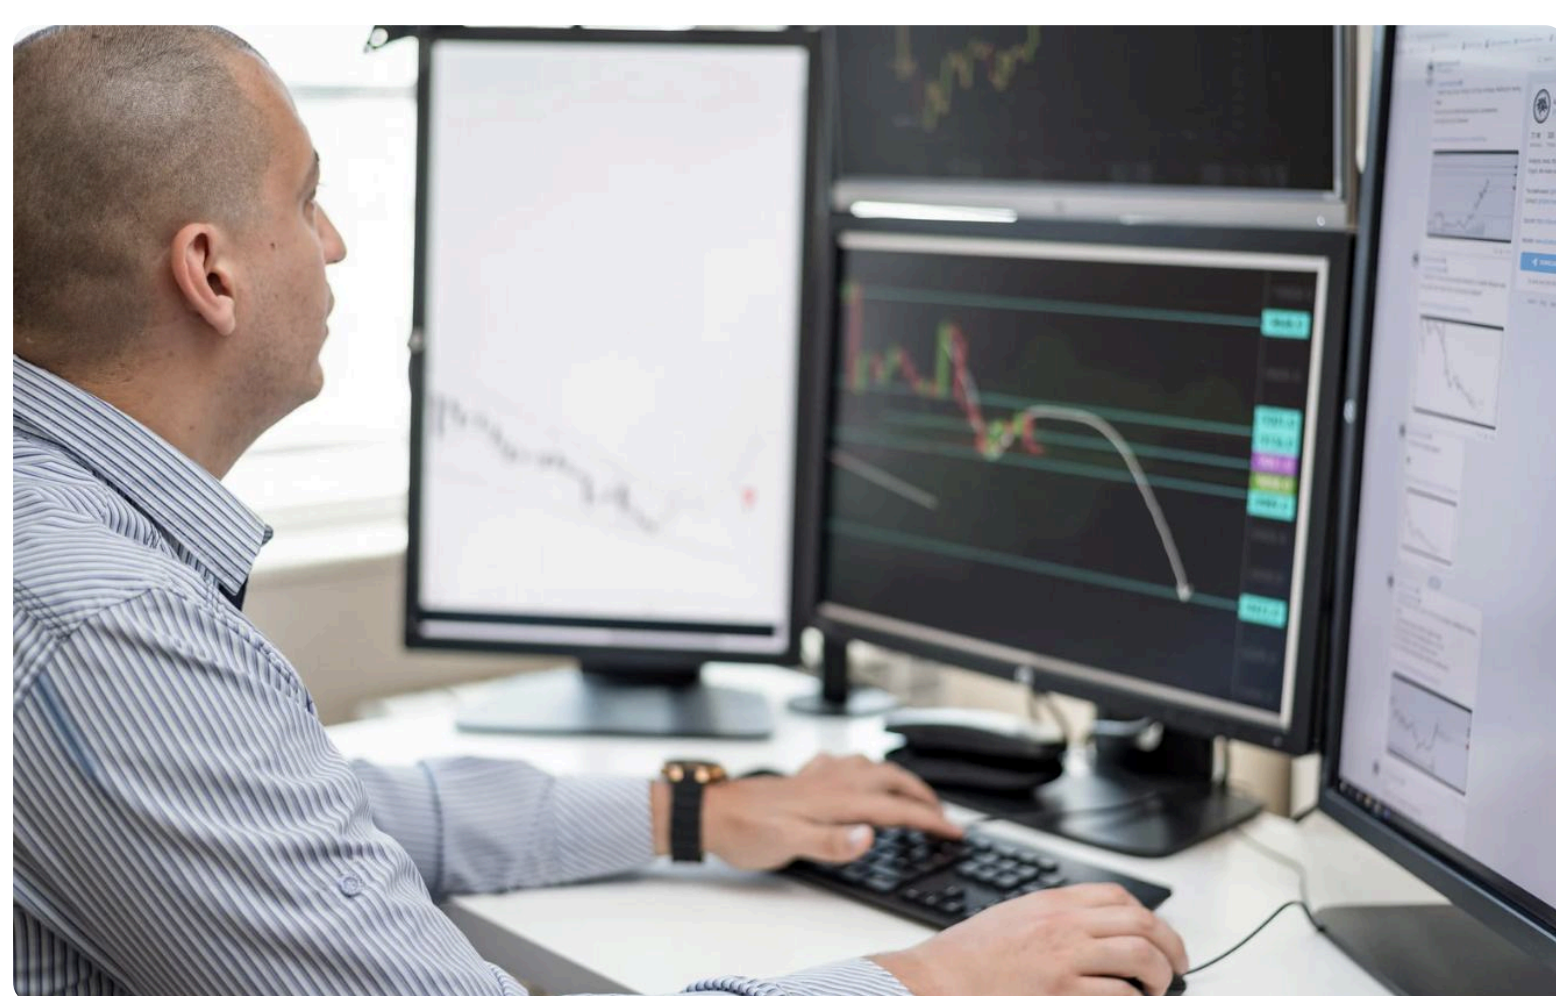

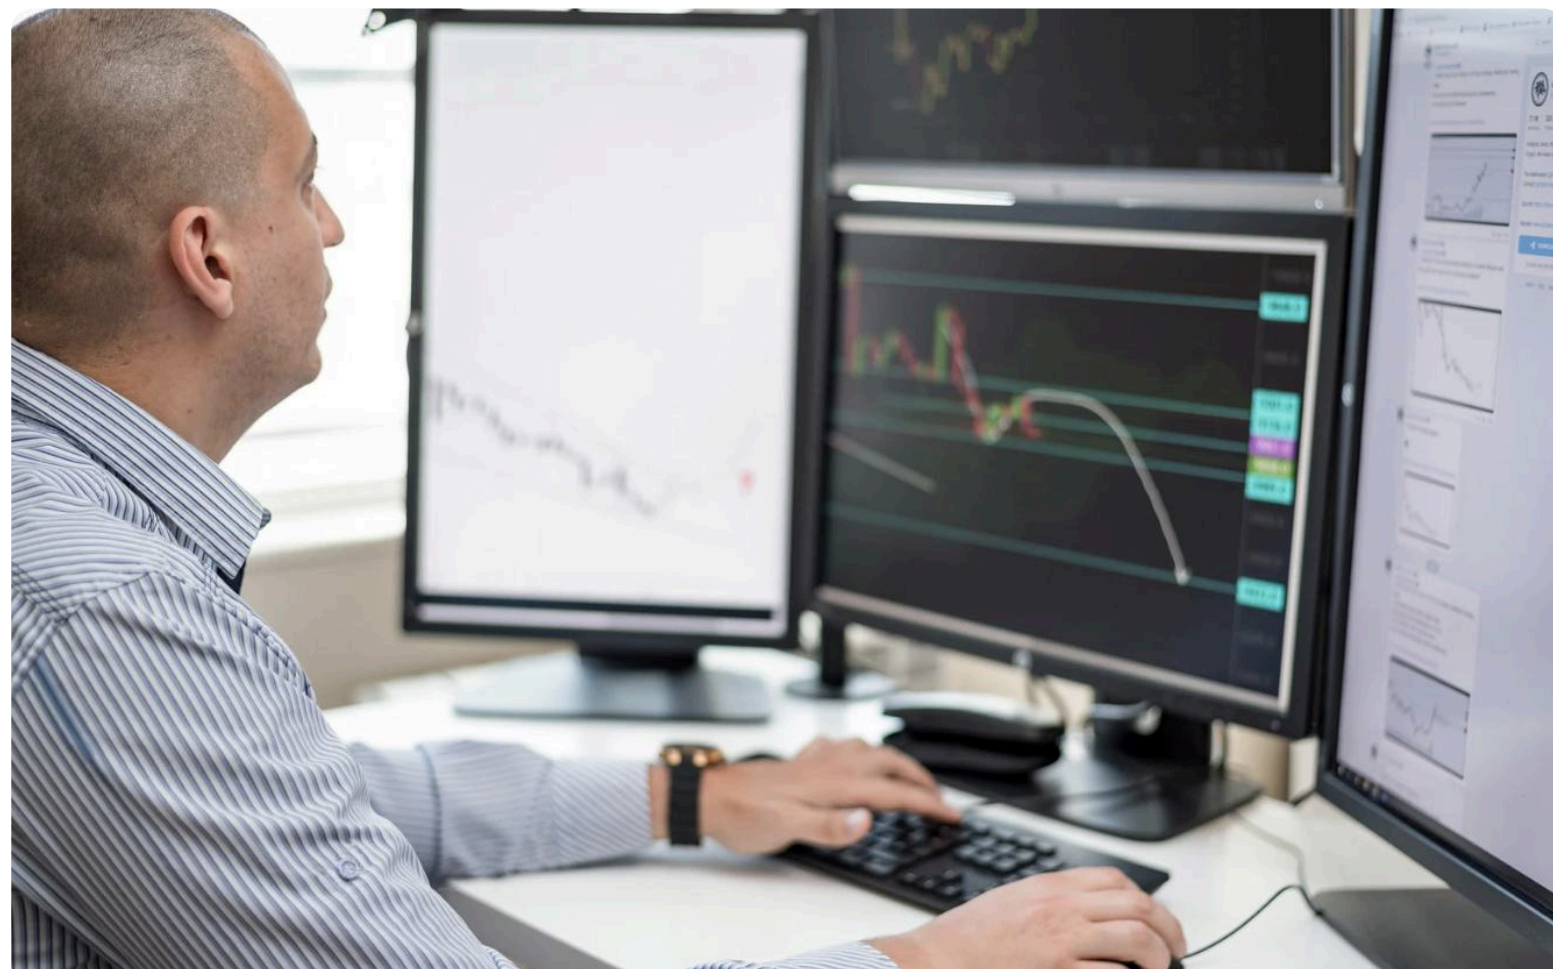

### Dori AI enables **Data-Driven AI** decisions with an end-to-end platform

Dori AI provides a suite of tools and technologies that enable enterprises with a full-stack solution to address all their AI computer vision needs

#### Centralize Visual Data Management

Utilize live or stored visual data from any source and start extracting insights

#### Build Robust Computer Vision Applications

Turn visual data into predictive AI models that can be deployed on the edge or cloud

#### Make AI-Powered Decisions

Transform the way your enterprise makes decisions with real-time insights

## What Makes Dori Unique ?

#### Manufacturing DNA

Deep domain knowledge in manufacturing and digital transformation

#### Built for factory workers

Connecting the frontline to your digital operations

#### Comprehensive

Best-in-class features, in a single integrated platform

See Poka In Action

#### Schedule a 30-minute online demo

[Book a Demo](#)

#### Easy to use

Intuitive, modern design drives adoption and use

#### Industrial AI

For the Factory Floor

#### Enterprise-ready

Proven experience deploying connected worker at scale

NOT JUST A SHORT-TERM FIX

## Built for continuous improvement

Keep your workforce connected, empowered, and high-performing.

#### Danone Paperless Factory Showcases Manufacturing Sustainability

"With Poka's Forms feature, it really helped our factories move away from paper and digitalize processes from the bottom up."

German Figueroa, Digital Manufacturing Manager, Danone

# Seamless Collaboration, Zero Disruptions

Keep work flowing by uniting your people, processes, data, and tools. Eliminate silos and stay ahead of issues before they escalate.

BOOK A DEMO

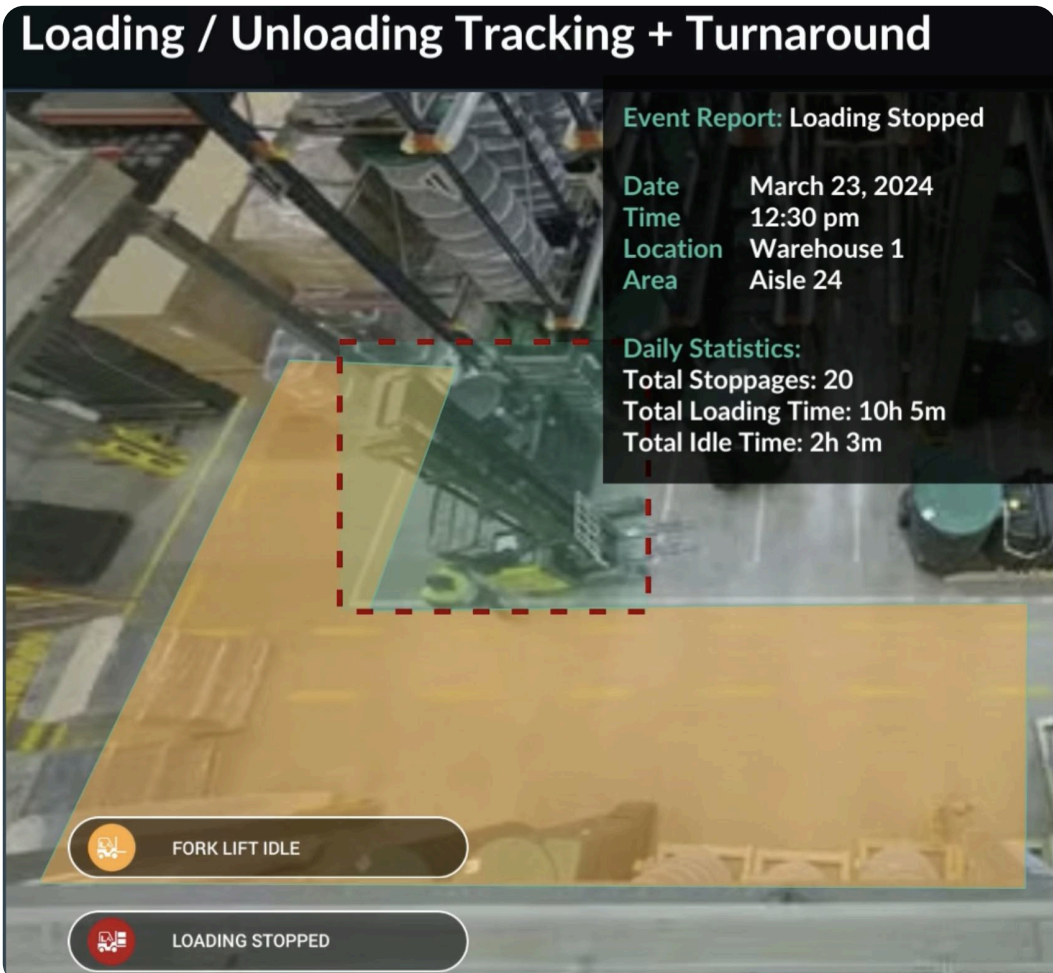

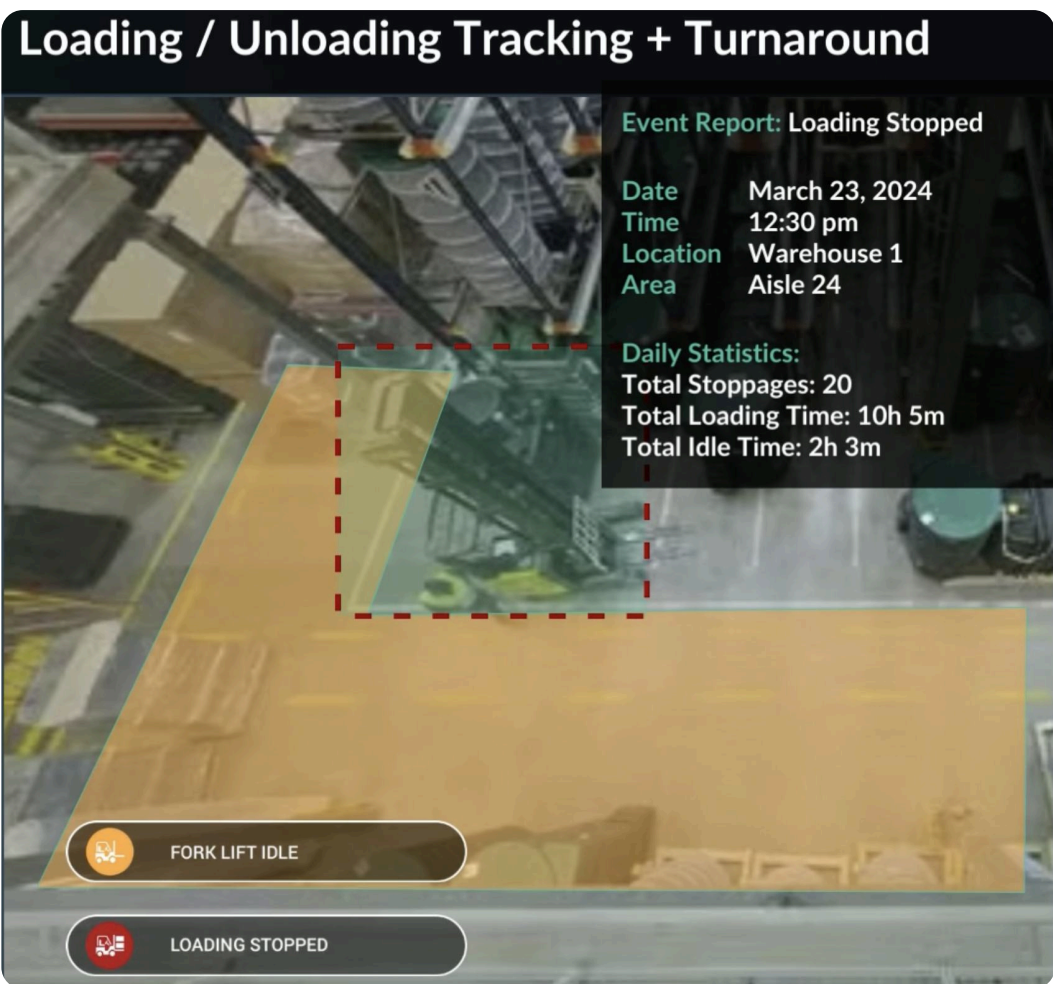

## We have Simplified the Tech

Dori AI provides a suite of template AI computer vision applications across a broad range of manufacturing needs

### Real-Time Feedback

24/7 live monitoring and alerts for zone managers and on-site personnel

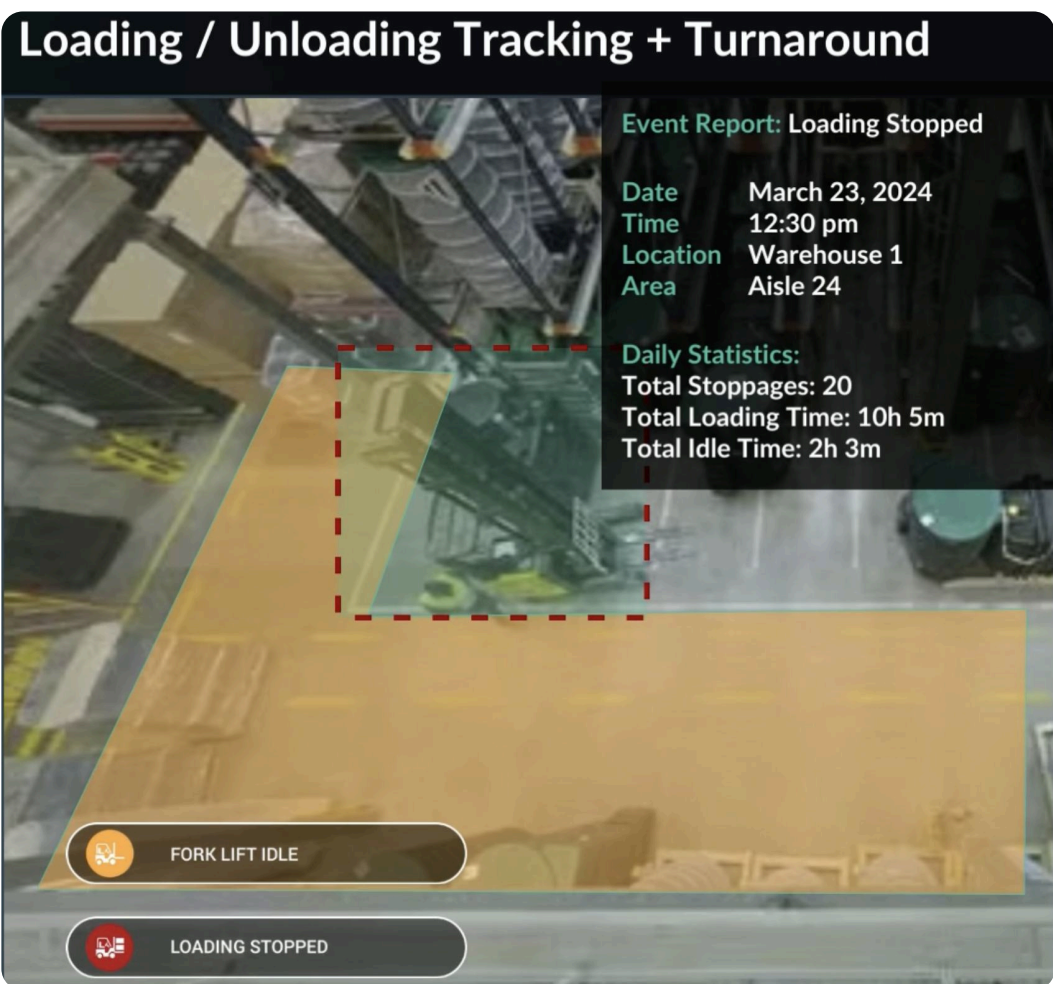

Learn More

### AI-Driven Decisions

Capture performance indicators and improve key customer, employee, and business metrics

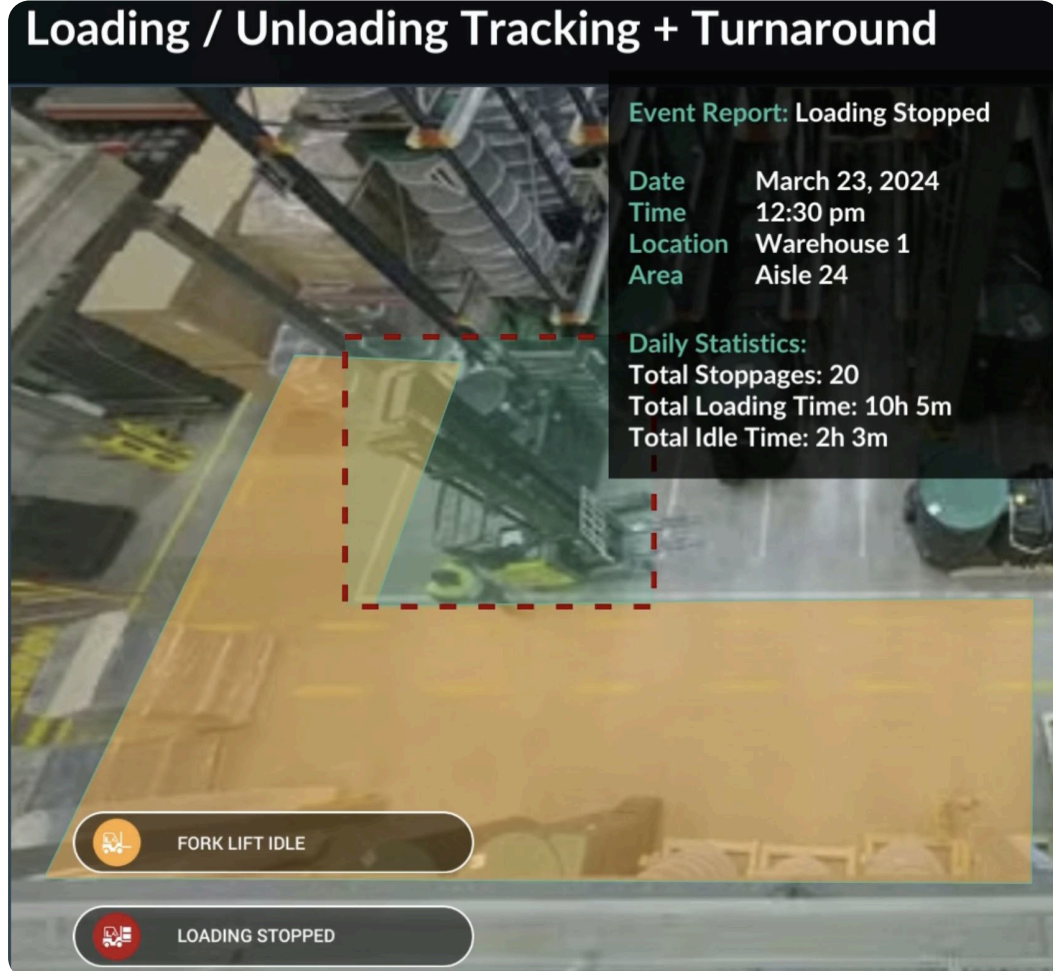

Learn More

### Instant Video Replay

For on-the-spot troubleshooting and new or existing employee training

Learn More

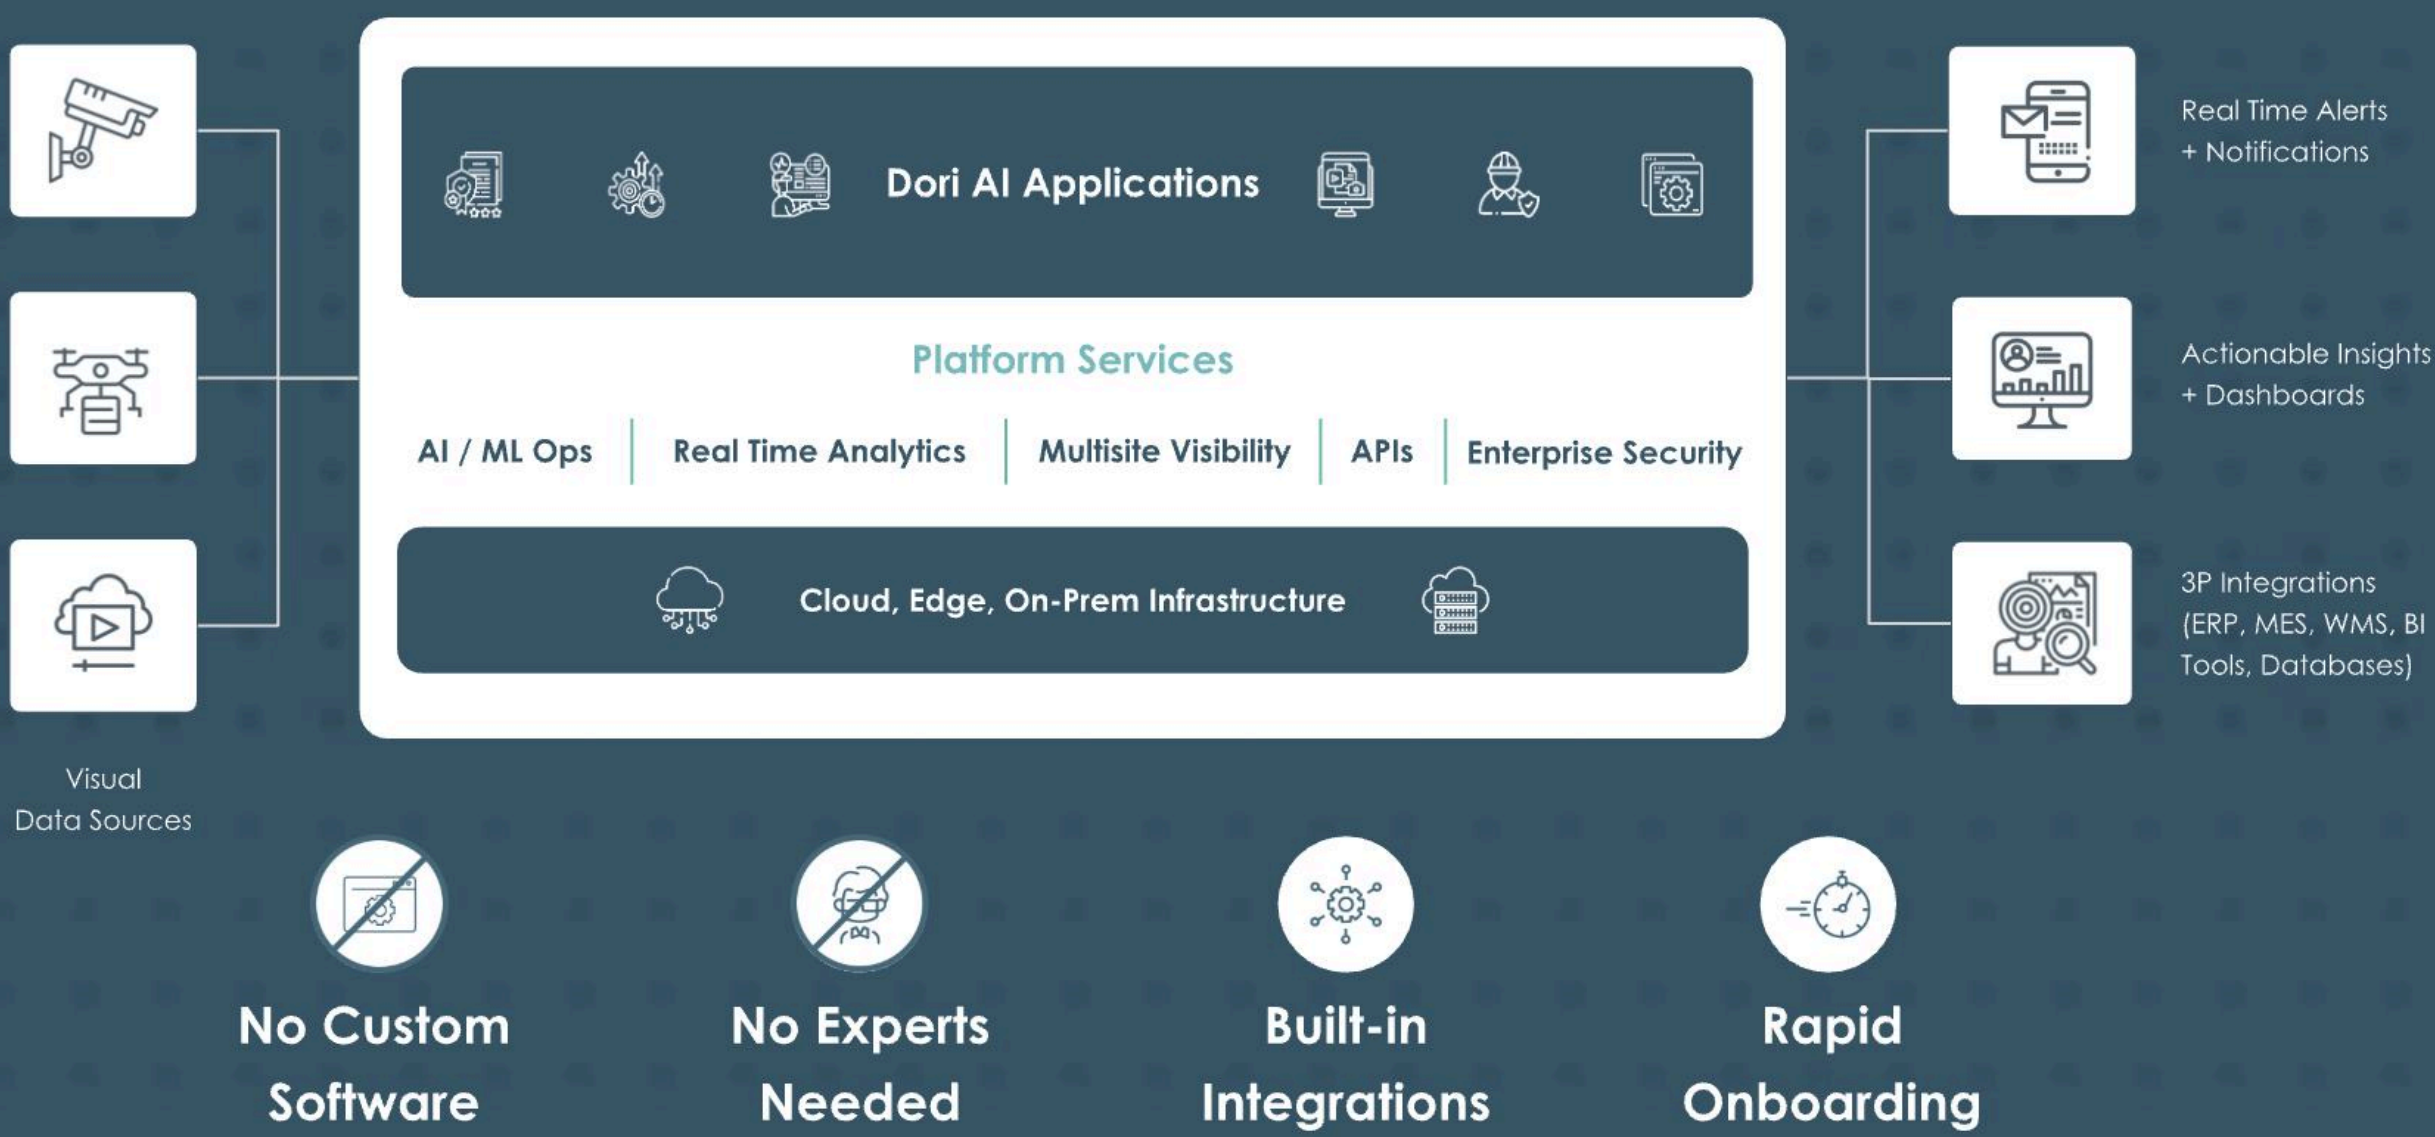

### Intelligent Visual Search

Search visual metadata by area, branch, zone, or shift for faster root cause analysis

Learn More

## One Platform Many Applications

Dori AI provides a suite of tools and technologies that enable enterprises with a full-stack solution to address all their AI computer vision needs.

## Data-Driven AI Development

Extract the business value out of your visual data and turn images and videos into real-time operational insights powered by AI and computer vision without the need for a large data science or engineering team.

#### No-Code / Low-Code

Utilize our visual dashboard interfaces to quickly put together robust and custom AI applications without the need for a data-scientist or full-stack engineer.

#### Robust Dataset Creation

Creating datasets for model training is no longer the job of a data scientist. With our platform, we can augment and synthesize the datasets needed even with just a few source images

#### Automated Data Labeling

Our proprietary data annotation tools enable subject matter experts to automatically label the ground truth data needed for training via pretrained or custom models.

#### Application Templates

Leverage one of our pre-built application templates that can be quickly configured for any use case. Customized views and metrics can easily be integrated and displayed.

#### Scalable Deployments

Simultaneously deploy models and applications across all edge, cloud, or hybrid endpoints. Centrally monitor each deployment to enable rapid human-in-the-loop analysis and retraining.

#### Visual System of Record

Receive real-time alerts from deployed applications and discover actionable insights from historical visual analytics and dashboard reports.

# Quality You Can Count On

When equipment stalls or safety's on the line, every second counts. We help frontline teams prevent downtime, stay safe, and act fast.

Less chasing problems. More getting things done safely and efficiently.

### Dori Key Use Cases

All Customer Stories →

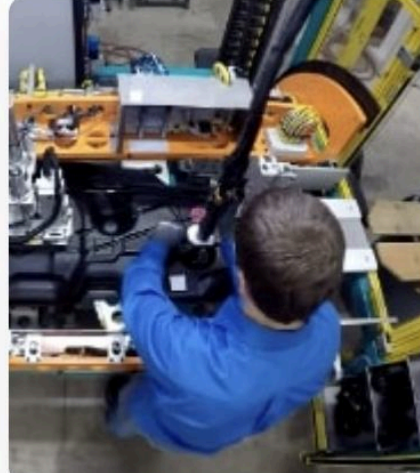

Dori AI enables enterprises with immense business value across a range of key use cases and many more.

#### Workforce Productivity Monitoring

Monitor presence and time spent of workforce at each station/area and machine downtime

Learn More

#### Assembly SOP Compliance

Validate sequence and correctness of SOP steps and accurately measure cycle times

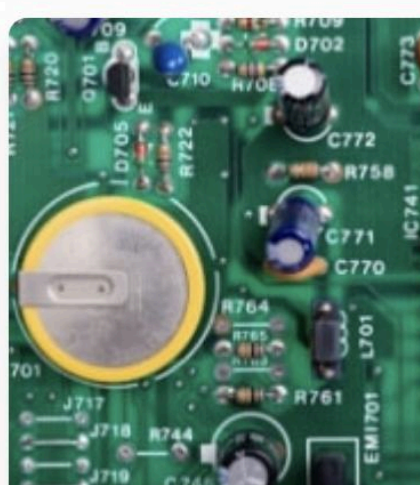

Learn More

#### Asset / Equipment Utilization

Ensure all resources are being utilized appropriately and business operations are smooth

Learn More

#### Visual Quality Inspection

Visually inspect product and work quality to detect any defects or violations

Learn More

## Frequently asked questions

Get answers to your most pressing questions about how L2L improves quality, reduces defects, eliminates scrap, and ensures compliance across your operations.

How does L2L help reduce defects and improve quality?

Can L2L support compliance and audit readiness?

Which quality metrics can L2L track?
